

Dear friends,

You are cordially invited to come to a screening party for the stunning film, “Unnatural Selection,” an award-winning European documentary on the harsh consequences of genetic engineering around the world.

Where: _____

When: _____

What: 10-20 people, food and beverages, a 60 minute DVD, discussion of the issues and how to protect our health and environment.

Please RSVP to: _____

Directions: (visit www.mapquest.com to include a map to your house party)

[If this showing is in April, you can say: The screening of this documentary is being held in conjunction with Earth Day (April 22) and International GMOpposition Day (April 8)—a 30 nation campaign to raise awareness about the genetic engineering our foods and crops.]

About *Unnatural Selection*

“Best Film,” (CineEco, Portugal), “Best Long Production,” (IEFF, Brazil), and “Best Journalistic Achievement,” (IEFF, Germany).

“Meticulously researched, excellently photographed” –Ökomeia

“It is a work of compelling urgency and stunning beauty that should not be missed by anyone who cares about food and the people who grow it.”

–Brian Tokar, director, Biotechnology Project at the Institute for Social Ecology and editor of two books on the science and politics of biotechnology.

This film, made available for the first time in the US, reveals how

- A failed GM cotton crop prompts farmer suicides in India.
- Windborne GM canola threatens farms in Canada, forcing one farmer to the Supreme Court.
- A company seeks approval for giant GM salmon that may threaten the survival of the natural species.
- GM pigs are born with ghastly mutations.
- Alarming findings convince a scientist that GMOs may lead to a catastrophe.

It features Vandana Shiva, Andrew Kimbrell, Percy Schmeiser and others.
