

Table of Contents

Foreword by Michael Meacher, MP	i
Acknowledgments	iii
<hr/>	
Introduction: Deceptions, Assumptions, and Denial—Exposing the roots of genetically modified crops	1
Terms and concepts used throughout this book	13
<hr/>	
Part 1: The Documented Health Risks of Genetically Engineered Foods	17
Section 1: Evidence of reactions in animals and humans	21
Section 2: Gene insertion disrupts the DNA	63
Section 3: The protein produced by the inserted gene may create problems	89
Section 4: The foreign protein may be different than what is intended	109
Section 5: Transfer of genes to gut bacteria, internal organs, or viruses	123
Section 6: GM crops may increase environmental toxins and bioaccumulate toxins in the food chain.....	143
Section 7: Other types of GM foods carry risks.....	155
Section 8: Risks are greater for children and newborns	163
Connecting the dots: looking for patterns and causes	168
<hr/>	
Introduction to Parts 2 and 3	173
Part 2: The Regulation of GM Foods is Inadequate to Protect Public Health	175
Regulators are often hijacked by the biotech industry.....	176
Inadequate testing requirements are the norm among GM crop regulators worldwide.....	183
Lack of safeguards exposes the food supply to GM contamination	191
<hr/>	
Part 3: Industry Studies are Not Competent to Identify Most of the Unpredicted Side Effects	193
The enormous pressure not to discover problems results in very few studies, most of which are poorly done	194
Case study: One scientist’s shock with GM research	197
Case study: Spinning failure into proclamations of success.....	197
Animal feeding studies overlook most potential problems	203
Compositional studies are not comprehensive enough to detect hazards	215
Evaluating allergenicity is not guaranteed.....	222
Case Study: The blood test on StarLink’s protein was flawed.....	229
Case Study: Irregularities marred evaluations of Monsanto’s GM drug, recombinant bovine growth hormone (rbGH).....	230
Canadian GM food approvals are assumption-based.....	231
Chart of several safety-related assumptions that have been proven wrong.....	233

False assumptions that viral genes in disease-resistant crops won't recombine to create new viruses.....	237
<hr/>	
Part 4: Flaws in the Arguments Used to Justify GM Crops	239
Why GM crops are not needed to feed the world.....	240
Golden rice is the wrong way to supplement Vitamin A	243
<hr/>	
Conclusion	247
<hr/>	
Appendix	255
Gathering data and staying up-to-date on the risks of GM foods	256
How to avoid eating genetically modified foods.....	257
List of GM crops	258
Food enzymes from genetically modified organisms.....	259
Special alert on aspartame, a genetically engineered sweetener	260
Institute for Responsible Technology	261
Credentials of those cited often in the text.....	262
Endnotes	263
Index	306
About the Author	319
